

# LOCATE

## TRANSLORE LOCATE

TransLore Locate offers much more than real-time ticket management. Whether locating your own facilities or using contract locating, you have proactive tools. When you need more than a simple ticket viewer, TransLore Locate is a full-featured production tool that puts you in control of your damage prevention efforts.

## PROACTIVE

TransLore Locate offers features you need to gain a proactive approach to damage prevention. The use of rules-based actions, TransLore alerts and notifies parties internally and externally before digging begins.

## WIRELESS

TransLore Locate offers real-time ticket management using any wireless technology including common aircards. While wireless is fast, you can use TransLore Locate offline as well - ideal where a wireless signal are not available in the field.

## MAPPING

Locators know before leaving the truck what to expect underground at the dig site. That's the precise information needed for hookups and accurate utility marking.

## CONTROL

From a single TransLore screen, overview all tickets across your entire locating operation. TransLore is highly flexible and designed to meet the needs of users from a few hundred to many thousands of monthly dig tickets.

## EXPERIENCE

TransLore Locate is a production tool, not some simple web viewer or email program. Nearly 63,000 tickets a day flow through our national Data Center. Regardless of your ticket volume, TransLore Locate is the preferred damage prevention tool.
