

SCREEN

TRANSLORE
TRANSMIT. TRANSACT. TRANSFORM.
much more than ticket management

Screening utility locate Call Center tickets is the fast, easy and safe way to effectively reduce damage prevention costs. Determine whether a conflict exists with facility lines *before* a Locator spends the time and money driving to dig sites.

- Eliminate unnecessary site visits
- Ideal for utilities with high profile facility lines
- Reduce labor and fuel costs
- Automatic or manual ticket processing
- Provides alerts and notifications
- Use your facility map data
- Easy to use

TransLore Screen works by comparing the One Call Center dig ticket coordinates with digital facility maps. A recommendation of Conflict or No Conflict is made based on proximity to facility lines.

Proactively identify tickets that are near high profile facility lines. Alert field and office personnel in advance of excavation ensuring all the right people are in the loop.

Screening is fully automated or performed ticket-by-ticket visually, or a combination of both methods. TransLore Screen uses your existing facility drawings and puts you in complete charge of facility updates.

Visual indicators are used throughout TransLore Screen to ensure all tickets are completed and deadlines are met.

Date, time, user name and pre-screen results are stored with each dig ticket, so that searches and other archival information can be recalled quickly whenever necessary.
