TransLore Web is the fast and easy solution to managing utility dig requests from state One Call Centers.

If you're online and have a web browser, then this simple and inexpensive solution is just right. No applications to install, update or support.

TransLore Web consolidates all of your utility locate records. Looking up a ticket six months old is fast and easy. No more searching through boxes of printed tickets looking for that single piece of paper.

Since we host your server, we manage all of the technology for you. TransLore Web uses the same robust database used by our full-featured TransLore Locate application, giving you time-tested performance. Your locating data is maintained off-site so it's safe, should a disaster happen.

Maintain complete control over your tickets through user-specific logins for each type of user, i.e. Supervisors, Crew Leaders, Locators, etc. Since the web interface is so easy to grasp, training for even the newest computer user is a snap and transition time is minimized.

Color coding is used throughout TransLore Web to ensure all tickets are worked on time. Clear a group of No Conflict tickets with a single click.

The user name, date and time stamped audit trail is stored online, so that ticket searches and other archival information can be recalled quickly, whenever necessary.

With all of your locating work electronically stored in TransLore Web, you can run reports on activity and workload. Exported data can be tracked longer term in your own spreadsheet or simple database.

Ask for a no-obligation demonstration today.
